

INSTRUCTIONS FOR GRAPHIC DESIGN

The lengths available for printing the adhesive tape are as follows:

185mm / 205mm / 250mm / 280mm

Considering a margin of at least 10 mm, the areas useful for the graphic setting are:

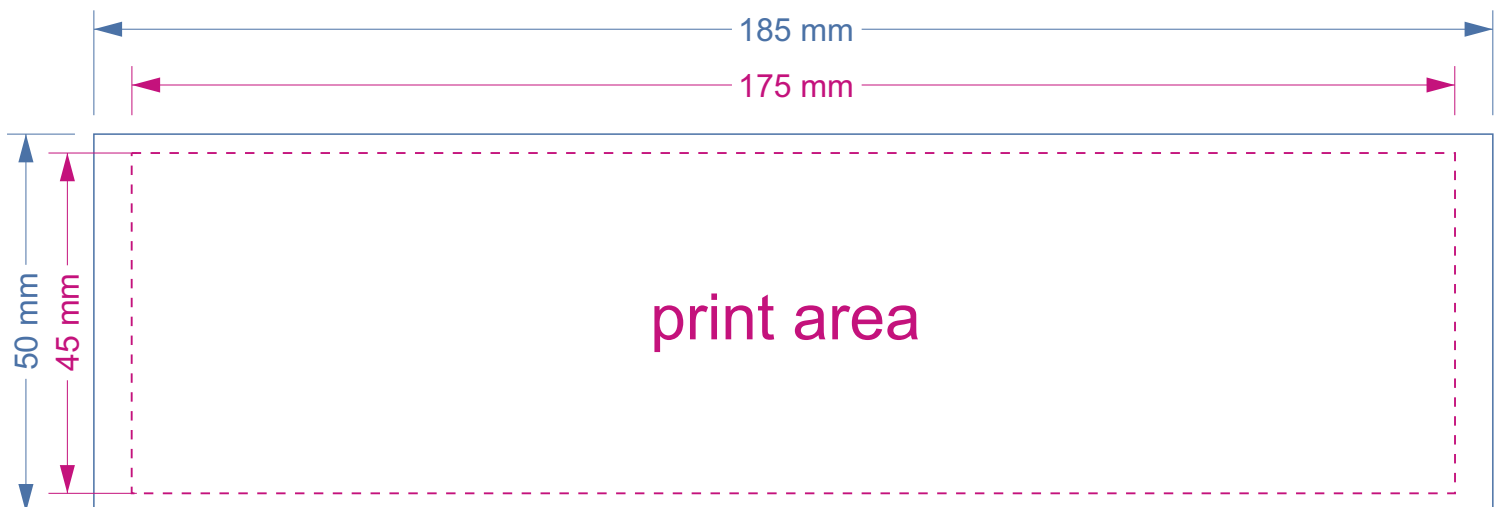

175mm / 195mm / 240mm / 270 mm

For a 50mm high adhesive tape, the useful printing area of **45mm**, while for a 75mm tape, the useful area is **70mm**.

Possibly set the print colors in **Pantone Coated** spot mode, if instead you prefer to work in CMYK mode, we will propose you the closest Pantone colors.

If you want to use **shades**, choose a pattern range from 30% to 70%.

Send your file in **.PDF** or **.EPS** format with characters converted into curves. The minimum thickness of the lines must be **0.25mm** (for negative print **0.50mm**). The minimum font size must be **8pt**. Below is an example for the layout of a 50mm tape on a 185mm print area.

ATTENTION. For a negative print there will be a white band on each repetition.

*White band
on each repetition*
